4 ROSES

ALL-AMERICA WINNERS

The Plants We Offer Are Not Southern Roses

They are No. 1 2-year budded plants, grown on the Pacific coast, the very finest plants obtainable. Each plant has three or more canes, 18 inches long or longer, proving their vigor. You will know the difference between these top grade plants, and lower priced plants, when they begin to grow in your garden, where their abundance of fibrous, flexible roots enable them to become established quickly and bloom early.

All these Roses will bloom in your garden this summer, if planted according to simple directions furnished with the plants. Plant dormant Rose bushes as soon as the soil thaws and dries out enough to be prepared properly.

Luxurious **MERION BLUE GRASS LAWN** *Most Economical You Can Grow*

Wherever blue grass grows, the new Merion blue grass is acclaimed as the finest lawn grass yet discovered, producing a thick, fine, deep green turf, like the yielding cushion of a long pile carpet, while resisting disease, crowding out weeds, and requiring less care than any other comparable fine lawn grass.

Beneath its beautiful surface lies the secret of its vigor—long roots and many rhizomes, the creeping stems which spread underground over a wide area and come up to form new top growth, developing the thickest stand of any comparable grass. The illustration tells the story.

Once established, Merion does not have to be reseeded annually to maintain its cover. Other superiorities recited with enthusiasm by those who have grown it are:

Spreads faster than Kentucky blue grass, stands closer mowing, resists heat and drouth, crowds out crab grass, holds its dark green color in the hottest weather with less water than other grasses.

You can have a Merion lawn with little, if any greater cost for seed, with annual savings for years to come in reduced upkeep. We offer seed grown from originator's stock, either straight or in a formula mixture.

For spring sowing, Merion formula has the advantage that it will germinate faster and provide a green cover more quickly, while Merion gradually takes over the entire area.

SOURCE OF MERION'S VIGOR IS UNDERGROUND

Compare the upturned sod of Merion Blue Grass, on left, with Kentucky Blue Grass, on right. The white runners so numerous on Merion, so few on its parent grass, are rhizomes—creeping stems—which spread underground and come up to produce new top growth over a large area, thickening the turf, crowding out weeds. Merion roots go deeper, making it resistant to drouth, and holding its color in hot weather.

MERION BLUE GRASS FORMULA—100% PERENNIAL GRASSES

Contains by weight:

42% Merion Blue Grass 38% Penn State Chewings Fescue 10% Highland Bent 10% Red Top
Due to small seed this gives over 900,000 seeds of Merion in one pound of formula.
1 lb. \$3.00; 3 lbs. \$9.00; 5 lbs. \$14.75; 10 lbs. \$29.00.

Produces thicker turf, stays greener all summer and stands closest mowing. 1 pound covers 750 sq. ft., 3 times as much as standard blue grass, costing no more to sow an equal area.

42% **MERION BLUE GRASS**, propagated from a single plant selection, which has demonstrated in trials throughout the country ability to stay green all summer, stand close mowing, and resist leaf spot and other diseases.

38% **PENN STATE CHEWINGS FESCUE**, improved strains of Fescue and tested for ability to stand close mowing. Spreads by root runners, and matches the texture of Merion blue grass.

10% **HIGHLAND BENT**, dry land bent, drought and disease resistant and not requiring the care of creeping bent, it spreads underground and makes a thick turf, spreading quickly.

10% **RED TOP**, a nurse grass to control weeds until Merion Blue Grass takes over.

MERION BLUE GRASS

For those desiring straight Merion Blue Grass we offer up to a maximum of 10 lbs. per customer due to the limited quantity. One lb. treated with a fungicide to improve sprouting and growth in adverse weather will sow 750 sq. ft. 1 lb. \$4.90; 3 lbs., \$14.70; 5 lbs., \$24.25; 10 lbs. \$48.00, all postpaid.

VAUGHAN'S "PARKS" MIXTURE

Less than half a normal crop of Kentucky blue grass was harvested last year. This caused a sharp increase in prices of this grass, which is the basis of our time-tried Parks Mixture.

Whenever a lawn is desired which combines the maximum of beauty and economy with a minimum of care, we recommend this mixture. Its basis is the finest Kentucky blue grass, which is combined with other suitable grasses in the proper proportion to produce a fine permanent turf. White clover is not included in this mixture, but it can be ordered separately. In one pound of Vaughan's "Parks" Lawn Seed there are 3,682,560 seeds. 1 lb., \$1.65; 2 lbs., \$3.30; 3 lbs., \$4.90; 5 lbs., \$8.10; 10 lbs., \$16.00; 15 lbs., \$23.90; 20 lbs., \$31.75; 25 lbs. \$39.50; 100 lbs., \$154.00.

MEYER ZOYSIA, NEW GRASS FOR HOT-SUMMER LAWNS

For lawns where summers are so hot, cool weather grasses turn brown, Meyer Zoysia has shown excellent results in tests at the U. S. Plant Industry station in Beltsville, Md.

Zoysia is a tropical grass which in warm climates has remarkable ability to spread and crowd out other grasses. It is not recommended for sections where Merion and Kentucky blue grass lawns are satisfactory.

Zoysia is recommended for planting in combination with Merion in and south of the following cities: Kansas City, St. Louis, Springfield, Ill., Indianapolis, Cincinnati and Baltimore.

Farther south where it is the practice to grow lawns of Bermuda and rye grass Zoysia is recommended for planting alone.

Zoysia is Grown from Sprigs or Plugs.

Seed is not available for Zoysia, but it is easily grown from sprigs, or plugs. It comes as strips of sod which can be cut into plugs, or broken into sprigs, and set out in a regular pattern like the illustration.

PLUGS SET OUT

SET IN YOUR LAWN THIS YEAR, THEY WILL COVER COMPLETELY BY NEXT YEAR

These are the features which make Zoysia Meyer superior for lawns in hot climates:

Eliminates Crabgrass and Summer Weeds

They will not come up through its dense turf.

Makes a Dense Turf that Mows Short, Grows Slowly so Requires Less Cutting

Will stand as short a cutting as a lawn mower can be set for.

Builds a Permanent Lawn

Improves year after year.

Flourishes in Hot Summer Sun

Will not grow in continually shaded areas.

SPREADING BEGINS

Drought and Disease Resistant

Will go weeks without water and yet shows no browning.

Grows Well in Both Acid and Alkali Soils

The main objection to Zoysia is that with the first frost it turns brown and does not green up until spring

SPECIAL OFFER No. 1

One pkt. each of the following six varieties listed on this page (\$1.60 value) prepaid for \$1. This includes Bouquet Hybrid Sweet Corn, Matchless Lettuce, Manalucie Tomato, Contender Bean, The Vaughan Hybrid Cucumber, and Wando Pea.

Long Ear of Finest Flavor

C101. Bouquet Hybrid Sweet Corn. 75 days. In sweet corn, above all, flavor counts. No matter what other merits an ear may have, if it is lacking in flavor the gardener who looks forward eagerly to that first bite is going to be disappointed. Bouquet is extremely sweet and tender, and has these other merits: Nine inch 12 rowed ear, with two ears on each 6-foot stalk. It is disease resistant also. Far superior in flavor to earlier varieties, it will give you the first taste of the season of truly delicious corn. We rate it the best of its season yet produced. Pkt., 25c; $\frac{1}{2}$ lb., 60c; lb., \$1.10; 2 lbs., \$2.10.

 Bouquet Sweet Corn

Best Home Garden Bean

B-23 Contender. 49 days. Of all the new beans introduced the last few years Contender stands out as best for the home garden. Equal to any in stringlessness and quality, it excels in yield over its long harvest season. Pkt., 25c; $\frac{1}{2}$ lb., 50c; lb., 85c; 2 lbs., \$1.45.

B-23 Greenpod Bush Bean Contender, Pkt., 25c

Lettuce of Bibb Quality All Summer

L-9. Matchless Lettuce. 55 days. Here is the lettuce both gourmets and home gardeners have dreamed about. It has the quality of Bibb, to which professional salad experts give top rating, yet can be harvested all summer from the home garden without loss of quality. In contrast, Bibb bolts to seed with the first warm weather. Matchless matures quickly and a succession of sowings will keep you supplied from early spring until winter. The picture of Matchless herewith was taken in our trials last August, an exceptionally hot and dry one, yet the plants showed no signs of bolting and quality was superb. It grows into a loose cluster of slender leaves shaped like a deer's tongue, thick and crisp, with a heavy midrib, equalling Bibb quality on all counts. We have never seen its equal and believe it is the finest lettuce yet introduced. Don't fail to try it. Pkt., 25c; Oz., \$1.00; $\frac{1}{2}$ lb., \$3.00.

L-9. Matchless Lettuce, Pkt., 25c

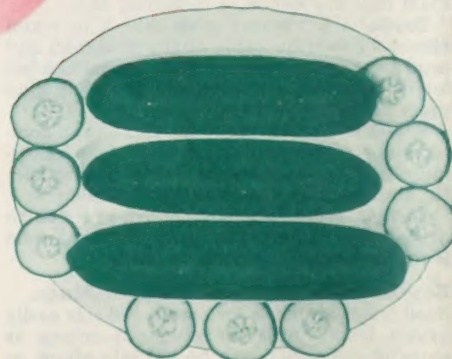

Quality Tomato Immune to Most Diseases

T-20 Manalucie. 86 days. Seldom are quality and freedom from disease combined in the same variety, but this tomato has both. It was the outstanding variety in our trials last summer, bearing heavily good size fruits, deep and fleshy, with a flavor combining sugar, acid and the tomato taste in a delicious blend. It was bred to resist practically all troubles, including early blight, blossom-end rot, cracking, wilt, and others you never heard about, it does all that. Dr. James M. Walter and David G. A. Kelbert produced it at Gulf Coast Experiment Station, Bradenton, Fla. Pkt., 35c.

Slenderest Cucumber Gives Long Yield

C-174 The Vaughan Hybrid Cucumber. 65 days. Here is the ideal cucumber in appearance—long, dark green, and slender. When you add F-1 hybrid vigor and resistance to the mosaic disease, which cuts short the life of so many varieties, you insure a big harvest spread over a long season, just what the home gardener requires. It is the best of all the hybrids in our opinion, and especially fitted for climbing a fence or trellis in the small garden, where it gives a maximum yield for the space occupied. Pkt., 25c; $\frac{1}{2}$ oz., \$2.75; oz., \$5.00.

Harvest Peas Through July and August

P-17 Wando Pea. 64 days. Where spring is short and summer hot, peas have so brief a season the harvest is counted by days. But here is a wrinkled pea, of excellent quality, which thrives and bears through the hottest summer months. Sow every three weeks for a supply all summer. Excellent for freezing, also. Pkt., 25c; $\frac{1}{2}$ lb., 45c; lb., 75c; 2 lbs., \$1.35.

B-11 Pole Bean Blue Coco. Pkt. 25c.

Blue Beans for Gourmets

B-11 Pole Bean Blue Coco. 65 days. Would you believe that this bean, with blue-purple pods of the irregular shape pictured, is the best flavored bean in the world? Many gourmets think it is, though it would not get a second glance from a chain store buyer or garden show judge. It is an old French pole bean, revived by the late Eleanor Rohde of England, who said nothing new by scientific breeders had ever equaled it. Pods that grow 9 inches long, on vines 15 feet tall, should be picked when 6 inches long for top quality. They are decorative as well as delicious. Vines are resistant to bean diseases and thrive in dry weather. The pods turn green, when cooked. Pkt., 25c; ½ lb., 65c; lb., \$1.15.

R-9 Radish Cherry Belle. Pkt., 25c.

Warm Weather Radish

R-9 Radish Cherry Belle. 25 days. The seed we offer is imported from Holland where it was grown by the originator A. R. Zwaan & Sons. In spite of its fast growing earliness, this new variety from Holland is slow to turn pithy the way other earlies do. Actually it reaches its best quality when the soil begins to warm up, so you can harvest several crops before hot weather. Round as a cherry and just as red, it has short tops and thrives in any garden soil. It won an All America bronze medal. Pkt., 25c; oz., 35c; ¼ lb., \$1.00; ½ lb., \$1.75.

P-66 Wisconsin Lakes Pepper. Pkt., 35c.

Heavy-yielding Wisconsin-bred Early Pepper

P-66 Pepper Wisconsin Lakes. 68 days. Research scientists in Wisconsin bred this early maturing pepper, which can be picked in the green stage a week earlier than California Wonder. The plants grow 18 to 21 inches tall and hold the fruits upright, in an easy-to-pick position. In either heavy or sandy soil it outyields later varieties. Fruits ripen to a bright scarlet. This new variety was developed by O. B. Combs from a plant selection taken from a planting of Asgrow King. Leaves are medium to small, dark green, and the well branched plants shade the stems enough to prevent sunscald. Pkt., 35c; ½ oz., \$1.00; oz., \$1.85.

Hybrid Sweet Spanish Onions in Cook County, Ill.

Harvest Sweet Spanish Onions in August

O-37. Hybrid Sweet Spanish Onion Plants. Any home gardener will get a thrill from growing giant Sweet Spanish onions to a weight of two pounds in his own garden and harvesting them in August, weeks before other onions reach maturity. The secret of both earliness and size is found in hybrid vigor, that strange power possessed only by the first generation offspring of pure bred parents. Years of successful research by both state and national experiment stations produced the parent strains which are responsible for this hybrid onion. The bulbs in the illustration were grown in ordinary garden soil near Chicago, Ill. Onions weighed more than two pounds each and were ready to harvest August 20. We offer green plants of Hybrid Sweet Spanish for home garden use, to be shipped April 15 and after, prepaid for 65c per bunch sufficient to plant 30 feet of row.

Rhode Island Red Early Watermelon

M-44 Rhode Island Red Watermelon. 82 days. Bred for the Rhode Island climate, where spring comes late, this melon is an outstanding addition to the small group that mature early enough for northern home gardens. Dr. Desmond Dolan of the Rhode Island Experiment Station crossed Dixie Queen with Honey Cream to produce a hybrid which bears fruit of ice-box size, with the sweetness of Georgia's biggest and best. The oval fruits are 8 to 12 pounds and have a good, firm rind. The bright red flesh is smooth and of fine texture, solid and crisp with comparatively few seeds. Pkt., 35c; ½ oz., 50c; oz., 85c; ¼ lb., \$2.20.

M-44 Watermelon Rhode Island Red. Pkt. 35c.

New Early Round-head Cabbage Defies Disease

C-2 Badger Market Cabbage. 65 days. New for 1954. This grows as large and as fast as the variety Racine Market which it resembles in color and equals in quality. It will hold this quality even longer in the field, however, without splitting, thus prolonging the harvest. Pkt. 25c.

T-19 TOMATO GIANT TREE. Pkt., 50c.

Talk About Hybrid Vigor, Giant Tree Excels It!

T 19 Tomato Giant Tree. (Italian Potato Leaved) 90 days. Talk about vigor! We have never seen a hybrid which can approach the vigor of growth shown by our Giant Tree tomato, which produces the largest fruit and the most prolific vine growth of any we know. Neither a hybrid nor a tetraploid, it has no up-to-date scientific help to give it magic strength; it just comes naturally. And with its vigor is combined the highest table quality.

For proof read these 1953 testimonials: Harold E. Willmsen, Grand View, Washington: "This spring I purchased a packet of Giant Tree tomato seed and can really say I had something. Planted primarily for shade, but when I tasted it, it removed all doubt that it was just another novelty. We had several fruits that weighed 37 ozs. but the average was 1—1½ lb. People came for miles to see them and those that tasted them said they couldn't be beat. Combining shade, quality and yield, it certainly can be called a utilitarian tomato."

Mrs. Charles Bishop, Canandaigua, N. Y.: "I thought you might be interested in the enclosed snap-shot of your Giant Tree tomato. It grew to a height of 10 feet. I had to use a step ladder to reach some of the fruit. They are very large, solid and delicious."

Capt. George L. Shumaker, Auburn, Ala. "Please send 3 pkts. of your Giant Tree tomato. Our plants last year did extremely well, even in sandy, hilltop soil. We gathered tomatoes from August until mid-December."

Mae Halcrow, Bowesmont, N. D. "Every seed I plant from Vaughan's always grows. Giant Tree tomato produced the most wonderful tomatoes I have ever seen and can grow successfully in North Dakota climate."

There are few rewards more satisfying for the amateur, than to produce tomatoes which are at once the largest, smoothest and of best table quality. The huge, pink fruits have few seeds. They are full of tender, delicious flesh of mild, non-acid flavor. You will eventually grow this variety. Why not be ahead of your neighbors? Pkt., 50c.

Potato Eyes for Planting

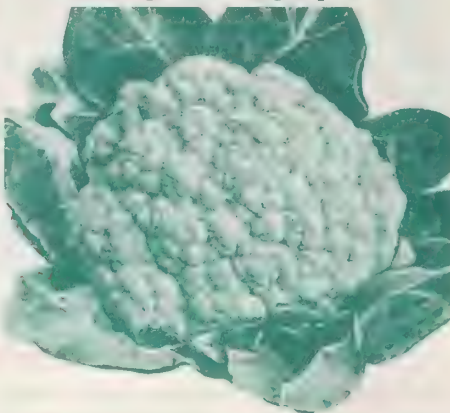

Instead of handling 100 big seed potatoes, you can plant 100 potato eyes and grow a home garden crop with no more labor than growing beans. Vaughan's sets are cut from the finest certified seed potatoes and treated with Chaogen to eliminate seed borne diseases. Plant 6 inches deep, 12 inches apart in rows 28 to 36 inches apart. Cultural instructions included. We offer the following varieties of top table quality for April or May shipment. P-47 White Cobbler—pure white, nearly round, a popular early variety. 100 for \$2.25 postpaid.

P-48 Cherokee—a new variety later than the White Cobbler, resistant to blight and scab, 100 for \$2.25 postpaid.

P-49 Red Pontiac—Red skinned with resistance to drought, vigorous grower, 100 for \$2.25 postpaid.

P-50 Osage—A new introduction with exceptional table quality as well as greater resistance to scab and other diseases, 100 for \$2.50 postpaid.

New Purple Cauliflower

C 67 Early Purple-Head Cauliflower. 85 days. You will not see this in markets, for it is too tender to stand the handling, but for home garden growing it is superb. You will like this, whether you like market cauliflower or not. Pkt. 25c; ¼ oz., 95c; ½ oz., \$1.80; oz., \$3.00.

Kill That Crab Grass!

Another year's experience has piled up more evidence that Potassium Cyanate is the most reliable killer. It destroys crab grass and chick weed at any stage of growth, even when seeding. It is non-poisonous to you, your children and pets, and is easily controlled, so border plants are not injured by it.

Based upon tests conducted during the past year, experiment stations give the following advice:

Selective killing of crab grass is more effective when chemicals are applied in liquid form, as sprays.

Rates heavier than recommended cause excessive injury to desired turf grasses.

Treatment repeated in five to seven day intervals gave best and quickest control, preventing weakened crab grass from recovering.

Chemicals act within three days after spraying, and should be repeated on schedule until all crab grass plants are dead.

Crab-Not, Formulation of Potassium Cyanate

Kill Weeds, Feed Lawn In One Application

No. S421. No-Weed Turfod. 6-10-4. This is a mixture of organic plant food with weed killers including 2, 4D, which resulted from experiments conducted at the Pennsylvania Experiment Station. It can be applied with a fertilizer spreader at 1½ to 2 lbs. per 100 square feet and will kill broad leaved weeds, at the same time feeding the lawn. An application in spring and fall has proved in two years' tests to produce a thick, beautiful turf with less than 2% weeds. Do not use on lawns less than a year old, or on close mown creeping bent in summer. Price per 7½ lb. pkg., \$1.25; postpaid \$1.70 within 500 miles; 25 lb., bag \$3.25; 80 lb. bag \$7.75, by freight or express charges collect.

A Drink Of This Makes Plants Kill Insects

No. S227. Insects which prey on plants can be killed by applying insecticide to the soil. Most successful example is found in sodium selenate, which florists have used for several years, on greenhouse flowers. Do not apply it to food plants of any kind. To insure safety when used with house plants we offer it in capsules, each containing a safe but effective dose for an average pot.

New Lawn AND Garden Aids

Modern Grass Catcher Grinds Leaves to Fine Pulp.

S623 The Lawne Mulcher. Grass clippings left by mowing do not always benefit lawns. When too heavy they may heat and kill the grass, and even when light they may form "thatch"—a blanket of undecayed clippings that collects without decaying until it is heavy enough to prevent water getting down to roots, or plant food reaching the soil. This aluminum attachment fastened to your lawn mower will grind the clippings into pulp which quickly dries, and forms a fine mulch on the soil surface, admitting air and water freely, and shading the grass roots. Especially valuable for bent lawns. It is rustproof, weighs less than 4 pounds. Each \$6.95. Postage extra.

3-Tube Sprinkler Wets Wide Area

S913. Supplex Triple-tube Plastic Sprinkler. Garden sprinklers made of plastic tubes with perforations through which the water escapes in a fine spray, have proved their usefulness. Light, weather-proof, easily curved to follow contours of planted areas, they cover a large space with an evenly distributed spray, which the ground quickly absorbs. This one has three tubes with openings on top only, but can be used as a soil soaker when turned upside down. Made of vinyl plastic, it will not rot or mildew. 25 foot length covers space 25x25 feet, with reel, \$3.98. 50 foot length, covers space 50x20 feet, with reel, \$5.98.

Multiply Costly Woody Plants by Developing Roots on Stems

S1924 Airwrap. Costly magnolias, roses, blueberries, azaleas or any woody plants can be induced to form roots on a selected stem by the Airwrap method which inexperienced gardeners can use. Once rooted the stem can be cut off and planted. Airwrap plastic film is wrapped around a ball of sphagnum moss, surrounding a wound which is prepared with a knife, according to directions. The moss is saturated and the film holds the moisture in, while allowing air to penetrate freely. The film contains necessary growth and rooting chemicals. One kit will make eight new plants. Each, \$1.95. Postpaid \$2.15.

Pressure Sprayer is Big, But Not a Burden

S743. Dobbins DeLuxe Garden Sprayer. In a pressure sprayer, which you carry around the garden, two gallons is a lot of spray but three is too much for a woman to handle with comfort. This well designed 2-gallon job can be used for any purpose which the bigger size would serve, and is not a chore to handle. It has an oval tank with an ultra modern handle, so you can lift it and set it down in a new place while you go about spraying without a burden on your back. Complete with high pressure hose, extension and automatic shut off. Each \$11.85.

This One Spray Protects All Plants from Enemies

S101. Acme All-Around Spray. No longer does the gardener require a varied collection of insecticides and fungicides to protect his plants from pests. This modern all-around formulation can be used on flowers, vegetables, roses, shrubs and trees, including all kinds of fruit trees and bush fruits. Rotenone, D. D. T. and the newest fungicide, zinc dimethyl dithiocarbamate are combined with 20% sulphur to insure complete protection without the need for diagnosing the ailment before applying the remedy. It can be used as a dust or spray. One pound will make 12 gallons of liquid spray. Lb., \$1.10; 4 lbs. \$3.50.

Hidden Rope Keeps Animals Away

No. S290 VAUGHAN'S ANIMAL REPEL-LANT ROPE. Dogs, cats, rabbits, may be all right in their place, but you don't want them near your plants. This rope is impregnated with improved and more effective oils which set up a barrier of scent which turns them all away. Circle flower bed or border, or vegetable plot, pegging it on the ground, lightly covered. Tie a piece around an upright tree or evergreen, or hide it in foliage. All animals hate this odor. 100 ft., in can, \$1.50, prepaid.

Electric Seeder Saves Time and Seed in Garden.

S1603. Instead of tap, tap, tapping the seed packet with your finger, you dump the seed into this funnel shaped trough, set the battery to buzzing, and the seed drop one by one as close as you please, as you walk down garden row. It does a better job on seed flats, too. A flash light battery vibrates the feeder. Florists use it for fine seeds. Each \$2.25, prepaid.

Do Liquid Plant Foods Work Miracles?

No. S420. Fertil-flo. Fantastic claims of the radio "pitch-men" about magic or miracle-working soluble plant foods, may have turned you against them. But there is solid merit in the bona-fide discoveries which scientists have made about the quick action of plant foods in solution both on roots, and leaves, which latter is termed "foliar nutrition."

Pound for pound they will cost you more than dry plant food, but you spread them in your hose water, and save work; scientists have found that a higher percentage is used by the plants, as well as acting quicker.

They will do a job for home gardeners extremely difficult to equal with dry plant food applications, especially on growing lawns and gardens. Fertil-flo has the highest percentage of food elements, 100% soluble, which we could find. Seventy-nine percent of its volume consists of Nitrogen, 10%; Phosphoric Acid, 52%; water soluble potash, 17%. When dissolved, no residue remains.

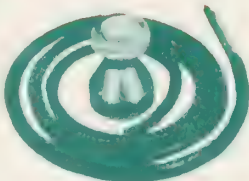

It has been widely tested as a starter solution with remarkable results.

For lawns and gardens, spread 1 lb., dissolved as instructed, over 400 square feet. Fertil-flo, 3 oz., 35c; postpaid 45c; 1 lb., \$1.00, postpaid \$1.20; 3 lb., \$2.50, postpaid \$2.85; 15 lbs., \$9, postpaid \$9.90.

Feeds Plants Through Hose Water

No. S915 HOZON.

Simplest, most practical and widely useful gadget to mix plant food and some insecticides and fungicides with the hose water is Hozon. This siphoning device draws from an open bucket or tub water in which the soluble plant food has been mixed. Insoluble residue remains in the bucket, without rising to clog or corrode the siphon. The liquid from the bucket is mixed with hose water in the ratio of 12 to 1, when pressure is 25 lbs. One gallon of solution is drawn from the pail in about 5 minutes, and distributed over the lawn or garden diluted with water 12 to 18 times its volume, depending upon the pressure. Hozon siphon is brass, with stainless steel check valve, rubber suction tube and stainless steel strainer to prevent clogging. Each, \$2.25, postpaid, \$2.40.

Don't Use This Two-Faced Chemical Unless You Can Count

S2028 Garden Cyanamid is a "Jekyll and Hyde" chemical. First, it is death on seed, for 21 warm days after it is spaded into the soil according to directions. Weed seed, also grass seed or any seed at all will be destroyed by this chemical during its "killer" phase. But after three warm weeks

it turns into a benefactor and supplies long-lasting nitrogen, plus soil-conditioning lime, for the crops which are sown or set-out after it loses the power to destroy.

When first applied to the soil, changes begin during which Cyanamid is poisonous to seeds and plants. In 21 days with soil temperatures above 50 degrees, a transformation into safe plant nutrients is completed. In late fall or early spring, because of cold weather, five or six weeks may be required to make Cyanamid an entirely safe and amazingly efficient garden food. Full instructions come with it. 25 pounds will treat 500 sq. ft. \$3.75; 80 lbs., treats 3,200 sq. ft., \$9.50.

Flowers are $2\frac{1}{2}$ inches across. Pkt., 50c.

Violet Floral Carpet

265 ALYSSUM ROYAL CARPET. 4 in. All America Silver Medal, 1953. By some magic of plant breeding, Alyssum Violet Queen, with its myriad tiny flowers of unfading blue-violet, was induced to change its upright habit of growth and become a spreading carpet-like ground cover, the perfect companion for its white counterpart, Vaughan's Little Gem Alyssum (Carpet of Snow). There is a place in every garden for so rich a carpet, which enhances the beauty of flowers of every color growing near it. Plants spread over a 10-inch circle begin flowering when weeks old and continue until freezing, always uniform in color and habit. Pkt 25c; $\frac{1}{8}$ oz., 75c.

Pacific Hybrid Delphiniums

Culture: B, D or E, Page 50

Because of superiority to other strains, in many important points, Pacific Hybrid delphiniums have become by far the most popular in this country. We offer its named varieties with the assurance that they come so true from seed, you may count upon plants with little if any variation from the variety description. Plants are 60 to 65% mildew resistant. The stems are straight, strong and whippy, not easily broken by wind. Flowers are enormous, and set close together forming lovely plumes of color. Hybrid delphiniums dominate the garden in late June. In deep, rich soil they grow six feet or more tall, with long spikes of vivid color, or clear white. Besides the Pacific Giant hybrids we offer others which in our opinion are the best available in the world.

This strain produces plants that are 60 to 65 percent mildew resistant. The flowers are of immense size, tightly set on straight stems that are strong and whippy. The flowers do not shatter. Seeds germinate in 20 days

New Pink Delphinium

7535 DELPHINIUM ASTOLAT. For several years Frank Reinelt, originator of Pacific Hybrid Delphiniums, has been working to create pink delphiniums, equaling in size and beauty of flowers his famous white and blue varieties. Success has rewarded his efforts in this new strain, with flowers in varying tints of blush pink, true pink and mulberry pink, all with dark bees. They grow tall, with strong, whippy stems, with florets as large and spikes which compare favorably with those of the other Pacific Giants. All the various pink tones are lovely to see. The outstanding perennial novelty of the year. Pkt., \$1.00.

New Marigold Colors

Rich Patterns in Pinks

2247 DIANTHUS BRILLIANT. 18 in. This large flowered strain of free flowering pinks is a companion to the famous Gaiety, but with plain-edged instead of fringed flowers. It has even richer color patterns in crimson, cerise, pink, white and red, and each flower has a contrasting "pheasant's eye." It grows with the same vigor as Gaiety, in low bushes, with blooms at the end of every stem, and flowers all summer if faded flowers are removed. A brilliant garden subject, and lovely cut flower. Pkt., 25c.

Colorful New Climber

2690 HEARTS AND HONEY. The first color break out of Cardinal Climber. Leaves are jaggedly cut of a deep clear green, while the 2 inch flowers are projected from long narrow 2 in. tubes. Blooms through Summer into Fall until vines are killed by frost. Pkt., 25c.

The freely produced flowers are borne well above the dwarf bushy plants from early in summer until late into the fall. 1½ ft. tall. Unlike most doubles, which are extremely regular in form, Rusty Red blossoms have an irregular outline, which adds greatly to their charm, not only in the garden display, but also when they are used as cut flowers. Like Lulu it is outstanding for the garden border, edgings and in the rockery. It, too, was in full bloom throughout the season at our Western Springs Trials. Pkt., 25c.

Dwarfs for Borders

A delightful group of highly decorative small flowered marigolds has been developed in the last few years. The increased color range extends from bright yellow to darkest maroon, with many attractive blends of yellow, red and orange. 4061 **BALLERINA. F-1 HYBRID.** 2 ft. All America Honorable Mention, 1952. As proved by the variety Silver Medal, an F-1 hybrid petunia has a magic vigor, which increases its flowers, brightens their color, produces bushier, compact growth with stronger stems. Peach Color Viola

Vinca Rosea Resistant to Heat Wave

This attractive plant is recommended for shady places, but it also thrives in the hot sun. Proof of this was given last summer in our flower seed trials. All previous records were broken by continuous heat in August, and most of the several hundred flowers growing there, even though under regular irrigation, showed the effects of the heat. Flowers grew smaller and fewer, leaves wilted and turned brown, growth was generally interrupted. But vinca rosea kept green and produced its bright flowers in normal size all through the record breaking heat

6035 ZINNIAS CACTUS FLOWERED MIXED. (NEW GIANT BURPEE HYBRIDS.) 3 ft. As a semi-cactus dahlia differs from the formal decorative type, with its uniform petals, regularly arranged, so does the cactus flowered hybrid zinnia differ from the older forms of this flower. No zinnia has larger flowers than these, up to 6 inches in diameter; and all the softer zinnia colors are included in the mixture, besides some lovely pastels found nowhere else. In form as well as color, there is much variation. The petals of some flowers are fluted, others are flat and twisted, but all are beautiful, often spectacular. You will want a group in your garden, and flowers of this new type for bouquets. They bloom quickly from seed sown in the open, and continue to flower with increasing size and color brilliance until killed by frost. Pkt., 25c.

New Type Zinnias CANDY STRIPED

6180 ZINNIA PEPPERMINT STICK MIXED. An interesting new development in the popular striata or striped type, reselected for a wider color range, including red and white, red and yellow, pink and white, orange and white and purple and white. Rust-Resistant

If you have found Snapdragons difficult to grow, rust is probably responsible. Rust is a widespread disease which discolors the leaves and saps the vitality. Growing the Rust-resistant strain, difficulties disappear. Seeds germinate better, plants are more vigorous, the foliage clean, flowers large and of fine color and the flowering season prolonged. Seeds germinate in 20 days.

10 BEST COLORS

From careful records the 10 varieties listed below have been determined to be the most popular with home gardeners because of their bright colors and vigorous growth.

Vigorous Crimson Giant

- 431 **VELVET GIANT.** $2\frac{1}{2}$ ft. tall, each plant produces 6 to 12 spikes. Rich, velvety, deep crimson blooms show an undertone of orange-bronze. A top-notch variety for cutting and garden. Pkt., 25c.

- 432 **MAGIC CARPET.** Very compact with a good range of colors including pinks, terra cotta shaded apricot and a few purplish shades, with light shades predominating. Pkt., 25c.

For the difficult spot in your garden, try Coleus Vaughan's Rainbow Mixture. Does well in shaded and semi-shaded locations where protection from the bright sun brings out the rich colors. Take a few cuttings from your plants to grow on in the house for winter flowering.

Tetra Snapdragons

These unique flowers were created by science with an amazing treatment which changed the cell structure of the plants. "Tetra-snaps" are probably the most conspicuous success this method has so far attained.

Every merit which snapdragons have as a garden flower is magnified. They have greater vigor, a longer flowering season, darker green, glossier foliage, stronger stems, and their flowers have more and larger florets, with ruffled petals and brighter colors.

- 427 **VAUGHAN'S SNAPDRAGONS TETRA SUPREME MIXED.** Flowers of the exceptional beauty, size and vigor, characteristic of the "Tetra" strain, include colors of which only a few are illustrated. They range from shell pink to the deepest rose, from dark bronze through orange to pale yellow, with many intermediate sunset tints which are found in no other strain. Pkt., 25c
- 430 **WHITE.** Creamy white changing to pure white as flower ages. The primrose throat adds to the attractiveness of the large beautifully formed flowers.
- 434 **APPLEBLOSSOM.** Glistening pink with white tube.
- 436 **BRILLIANT ROSE.** Large florets of a true rose pink.
- 433 **CANDLELIGHT.** Clear bright yellow.
- 438 **CRIMSON.** A deep yet bright velvety crimson.
- 429 **ORCHID.** Rich orchid-purple with yellow blotch.
- 435 **SHADES OF ROSE AND PINK.** Ranging from lightest pink to the deeper tones of rose. Especially fine for the cutting garden.
- 428 **YELLOW.** A rich clear color. Each of the above, pkt., 25c.

Wilt Resistant Asters

Culture: A, B, D or E, Page 52

If planted in the garden among other plants, Asters do not seem as susceptible to disease as when planted in solid blocks. Wilt Resistant varieties are resistant to most of the Wilts that cause the seedlings to sag suddenly and die before they can bloom.

Aster Yellows are somewhat more difficult to control. Spraying with Lindane or D.D.T. to control leaf hoppers helps somewhat. Best preventative is to grow Asters inside a screen or cloth house such as is used for Dahlias. Plants in the open garden are subject to constant attack, so persistent, regular spraying is needed to kill the leaf hoppers that carry the disease. Aster seeds germinate in 8-10 days.

Salvias

Culture: D or E, A or B, Page 52

The brilliant scarlet Salvia Splendens, so highly valued in summer beds, borders, window boxes and as cut flowers, is by no means the only worthy member of this family. Wedgwood blue Salvia Farinacea Blue Bedder is increasingly popular in summer borders. Seeds germinate in 15-20 days.

SPLENDENS

4640 AMERICA, OR GLOBE OF FIRE. 16 in. Freest and most continuous bloomer; also the most uniform in habit, which makes it particularly valuable for bedding or ribbon planting. Pkt., 25c.

6043 PERSIAN CARPET. 18 in. All America Honorable Mention 1952. On compact bushy plants, flowers as large as a silver dollar are produced in the greatest abundance. They resemble dahlias, rather than zinnias, with pointed petals tipped with contrasting colors. They are fully double, almost globular and their colors are deep and rich, including yellow, orange, red, crimson, maroon, and pink in harmonious patterns, which fully justify its poetic name, Persian Carpet. SOWING THE SEED

COVERING THE SEED

Flower Seed Cultures—How to Sow

IN FIVE paragraphs below, designated A,B,C,D, and E we cover in considerable detail the methods of starting flower seeds which are available to the amateur without a greenhouse, and which cover well the needs of an outdoor garden. In the flower seed section in the case of each flower listed, information is given as to the cultural methods which can be used for that subject.

A Sow in the bed, border or row where the plants are to grow. The soil should be loamy, with well pulverized surface. With heavy soil inclined to cake and crack, it is usually best to grow plants in a seed bed (B) and transplant to the permanent place. Loosen the soil where seeds are to be sown, with the trowel, or hoe, several inches deep. Rake smooth. Broadcast small seeds and cover them lightly four or five times their diameter. Very small seeds may be merely pressed in. Larger seeds may be planted singly, well covered, but more thickly than plants are wanted. Firm the soil well over the seed. Watering now becomes of great importance. At no time should the soil be allowed to become hard and dry, yet excessive watering may cause the seeds to rot, sour the soil, or cause "damping off." When the plants appear, thin them out, allowing each to grow singly, without crowding. The distance between them is governed by their ultimate size and spread. Excess plants may usually be moved to a new location.

B Sow in outdoor seed bed, to be transplanted. The seed bed in the open should be of loose, mellow loam, raised slightly above the surrounding surface, and preferably surrounded by a wooden curb, to prevent rain washing across it. It should not be wider than four feet, so it can be worked easily. Shelter from high winds is valuable, but damp and shady corners are not desirable. Full sun is advisable when seedlings are up, while shade when needed, as in mid-summer for perennial seedlings, is best supplied by a lath or cloth canopy, which can be removed in damp and cloudy weather. Sow the seeds in rows which may be as close as five inches. Sowing and watering are the same as described in "A" above. Seedlings may be transplanted when they make true leaves, the second pair of leaves to appear; or they may be left until larger before being moved to their permanent location. Perennials should be moved from the seed bed to a nursery row, to grow until fall before being moved to the border.

C Sow in flat, pot or pan outdoors or in a cold frame. This method is applicable to slow germinating subjects, some of which may take a year to germinate. Fill the receptacle with potting soil as described in "D", firm the soil and broadcast the seed, covering four or five times their diameter. Place the receptacle in a shaded location, where there is free air circulation. During the spring, summer and fall, water often enough to prevent soil from drying out. A mulch

of peat moss will help retain moisture. In winter, place in a protected place outdoors and cover with leaves. Have patience with slow germinating subjects; do not disturb too quickly. Any live seed will eventually grow if given time enough, provided soil, moisture supply, etc., are right. When seedlings appear and make true leaves, transplant to pots, nursery row or permanent location. If moss forms on soil surface, sprinkle fresh earth over top.

D Sow indoors in a box, pot or pan. This method may be followed where there is a window facing south, enjoying sunlight most of the day. Use a standard florists' pot or pan (shallow pot) or a "flat," which is a shallow box, with holes bored in the bottom for drainage. Cover the drainage holes in pot or box with broken pottery; fill with potting soil. This is a mixture of half sand and half black loam. It may be obtained from florists. Firm the soil, and sow the seeds in rows, marking each row to identify the sowing. Water by setting the box or pot in water, so that it soaks up from below, or use a fine spray which does not wash the soil. Place in a dark place, covered with a wet newspaper blanket until the seeds sprout. As soon as sprouts appear bring into full light. Cover the box or pot with glass to check evaporation, but when moisture collects on glass wipe it off, and prop up one end of the glass to allow air to circulate during the sunny part of the day. A temperature not below 50 degrees at night, or 75 degrees by day, is best. Do not allow the soil to dry out. When the seedlings have made true leaves (the second set), they should be transplanted to other flats, giving at least two inches of space apart; or they may be moved to small pots or to an outdoor seed bed or border.

E Sow in a hotbed or cold frame. A cold frame or a hotbed heated by manure or other means may be used. The best method with flower seeds is to sow seeds in flats, which are placed in the frame. With manure heated beds, seeds should not be sown until the temperature of the newly made bed has dropped to 90 degrees. Watering and ventilation are important. On sunny spring days, always prop up one end of the sash to prevent overheating which may occur quickly and cause spindly growth. Do not allow the soil to dry out. When the seedlings have made true leaves, they should be transplanted to other flats, spaced two inches apart each way; or to the soil in the hotbed, or to an outdoor location, if late enough.

To Enjoy the Finest Vegetables, at Lowest Cost, Grow Your Own

In 1,000 square feet of garden soil enough fresh vegetables can be grown to supply the needs of a family of five during the harvest season, from May until November.

This food can be grown with work no harder than sweeping the floor, taking less time than would be required to purchase vegetables.

Vegetables fresh from the home garden possess a flavor which can never be equaled by others, because of the loss of quality which begins as soon as they are picked. In the case of sweet corn, peas, and others containing

considerable sugar, this loss is extreme, because of the sugar rapidly changing to starch.

Fresh picked vegetables are also rich in vitamins, which escape rapidly every hour that passes before they are served on the table. Delicious flavor and nutritious vitamins are a combination which only home gardeners can enjoy at their best.

Parents of young children will find them easy to interest in vegetables from their own garden. Thus a balanced diet becomes possible, at a minimum of expense.

VEGETABLE PLANTING CHART

The key-date for all planting for the outdoor garden, whether it is done directly in the open garden, or under protection to grow plants to be transplanted, is the last killing frost of spring. You can ascertain this date in your neighborhood from experienced gardeners who usually know when it is safe to set out tender plants. In the columns headed: "Time to Sow," one for indoors, the other for outdoors, letters are used to indicate the number of weeks in advance of this safety date, when the operations indicated may begin.

Weeks before date of last killing frost of spring.

A—10 weeks.

B—8 weeks.

C—6 weeks.

D—4 weeks.

E—2 weeks.

F—When danger of frost is over.

G—When soil is thoroughly warm, and nights above 60 degrees.

Vaughan's Vegetable Seeds

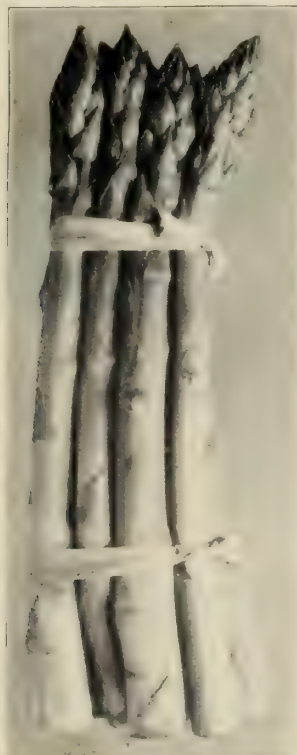

SYMBOL OF QUALITY

To guide home gardeners in selection of varieties to grow we mark with the symbol shown above those varieties which we consider to be superior under most conditions to other varieties of similar description and purpose.

Artichokes

A-1 ARTICHOKE GREEN GLOBE. A perennial with edible blossoms that matures second year after planting. It will not stand hard freezing and requires renewing every few years. Pkt., 25c; ½ oz., 75c; oz., \$1.50.

Asparagus

Seed Planting. Seed will produce a crop in three years. One ounce produces 300 plants. Roots will produce a crop in two years.

Plant roots two feet apart in rows four feet apart.

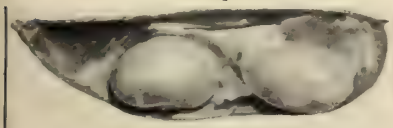

Roots (2 yrs. old) Doz. 100 1,000
MARY WASHINGTON \$1.00 \$3.75 \$32.00
 (If by mail, add postage as follows: 100, 50c.)

SEED

A-4 MARY WASHINGTON. Most recommended and a rust-proof strain. Pkt., 15c; oz., 45c; ½ lb., \$1.10

A-5 PARADISE. Heavy yielding, producing crop in two years. Pkt., 15c; oz., 65c; ½ lb., \$1.75

Edible Soy Beans

Soy Beans have proteins, 36.5%; fats, 17.5%; compared with Navy Beans' proteins, 22.7%; fats, 1.5%. They are esteemed highly as a food for diabetics.

B-3 BANSEL. 90 Days. Most recommended for northern districts. Pods turn from a pale green to a pale greenish yellow.

Pkt., 15c; ½ lb., 40c; 1 lb., 65c; 2 lbs., 95c
 Improved germination and vigor of growth in beans is induced by inoculating the seeds with Nitragin. Garden size 15c, sufficient to treat 6 lbs. of peas, beans, lima beans and sweet peas. Easy to apply. 3 packets for 40c

New Beans Surpass Old in Yield and Quality

TOPCROP

TENDERGREEN

QUALITY in beans is measured by stringlessness, by tenderness, or the absence of fiber or "linen" in the pod; by ability to produce well under favorable or adverse conditions and by the length and shape of pod. Round-pod beans are considered of superior quality, due to superior stringlessness and less fiber. Flat pod varieties rate high in yield and flavor.

One week before frost proof date, sow bush beans two inches deep, 2-4 inches apart, pole beans, 4-6 inches apart. Harvest pods before seeds form. If picked clean, plants will bear until frost; but young plants yield best and succession plantings are advised.

Round-Pod Bush Beans

B-23 CONTENDER. 49 Days. An excellent 1950 introduction of the late Dr. B. L. Wade. Undoubtedly the finest early home garden bush bean and perhaps the best of all sorts. Resistant to common bean mosaic and greasy pod. Pkt., 25c; ½ lb., 55c; lb., \$1.00; 2 lbs., \$1.90; 5 lbs., \$4.50.

B-1 WADE. 55 Days. All America Gold Medal, 1952. Supreme quality combined with heavy yield won the top award for this new variety, which experts consider the finest all-purpose greenpod bush bean yet developed. Pkt., 25c; ½ lb., 55c; lb., \$1.00; 2 lbs., \$1.90; 5 lbs., \$4.50.

B-13 TOPCROP. 50 Days. All America Gold Medal 1950. Until the introduction of the new variety Wade, this was unsurpassed for a combination of quality, yield and disease resistance. Compared with Wade it is not as dark a color, and the pods mature faster, giving a shorter period of top quality. It outyields Wade under most conditions. Pkt., 25c; ½ lb., 55c; lb., \$1.00; 2 lbs., \$1.90; 5 lbs., \$4.50

S-437 NITRAGIN

Inoculate Your Beans and Peas

The roots of legumes, which include peas and beans, are the hosts of bacteria which secrete nitrogen from the air. This is concentrated in nodules on the roots. The nitrogen becomes available to the soil, and stimulates the growth of the plant. This process is speeded up by applying a bacterial culture to the seed before planting. Nitragin is the original legume inoculation culture. S-437 Garden Size for beans, peas, sweet peas, lima beans and lupines. Pkt. 15c, 3 for 40c. Each packet treats 6 lbs. of seed.

Table Quality Beets

B-77 BEET PERFECTED DETROIT. Pkt., 15c; ½ oz., 25c

QUALITY in beets is measured by an even, globular shape, uniformity in size, bright, even color, flavor, fine texture and tenderness. Here, as with all vegetables, the difference between a fine and a mediocre strain of one variety may be as great as between different varieties.

Our best seed is grown only from transplanted roots, which are taken up in the fall, carefully graded, and transplanted again to produce seed. Only beets which conform to the highest quality standards are planted for seed.

All beets keep well in winter when properly stored. A special sowing should be made in midsummer to produce the storage crop.

As soon as soil can be worked in the spring, sow one seed to the inch, in drill half inch deep. Firm soil well over seed and water well if required. Thin when roots begin to make globes, to stand 4 inches apart in row. Cook discards with their tops.

Quantity needed to sow: 15 ft. row, 1 pkt.; 60 ft. row, 1 oz.; acre, 7 lbs. (Rows 18 in. apart).

B-78 FIRE BALL. 55 Days. A dark blood red beet that is almost completely free of zonation. A very nice sort for an early planting. The roots are a smooth globe shape like Detroit but do not grow as large. Pkt., 25c; ½ oz., 35c; oz., 55c; ¼ lb., \$1.25

It is earlier and almost spherical in shape. The tops are taller than Regular Detroit and the leaves are green tinged with red. Pkt., 15c; ½ oz., 25c; oz., 40c; ¼ lb., 95c

B-76 DETROIT DARK RED. 55 Days. A strikingly uniform strain producing a very smooth globe shaped root of a very dark red inside and out. BRUSSELS SPROUTS

Yellows Resistant and Standard Cabbage

WHEREVER the temperature of the soil rises to 85 degrees and remains for several days, there is danger of the yellows disease, and when it strikes, a crop failure may result.

In the great cabbage growing district centering around Racine and Kenosha, Wisconsin, an industry has been saved by developing strains of cabbage resistant to yellows. We offer seed of these strains, which have been developed by years of scientific work, and actual growing tests. The uniformity and yield of resistant strains have greatly improved. We recommend their use wherever danger of yellows may exist. If the disease strikes, resistant strains will show slight loss, where non-resistant types would probably be destroyed.

Cabbage Culture: After frost proof date, set out plants for early crop. Late varieties may be sown outdoors in June. Space small early types 12 inches apart, medium 18 inches, large late 2 feet. Water well and protect from worms and aphids.

In addition to color, size, shape, tops and season of maturity, our special strains are selected for sweetness, and the tenderness and even texture of the flesh, especially for a minimum "core." Scientists say the brighter the color, the more Vitamin A in carrots.

Sow as soon as soil can be prepared, in shallow drills, 5 seeds to the inch. Thin out when of finger size, and serve discards. Carrots will mature well growing close enough to touch, and remain delicious all season; but we prefer them young, and make several sowings.

Pkt., 20c; ½ lb., 55c; lb., 95c.

Newest Sweet Corn Hybrids

HYBRID sweet corn excels in three ways: Heavier yield, more even maturity, and resistance to Stewart's disease, and other troubles. Any open pollinated corn will mature unevenly and give edible ears from one planting over a longer period, which some may prefer. Our list has been revised to offer the best of both hybrid and open pollinated types, as proved in our trials.

A packet plants 40 hills; a pound, 400 hills; 12 lbs., an acre.

Sow two weeks before frost proof date, seeds two inches deep, three inches apart; to be thinned out to six inches; or six seeds to a hill, 2 to 3 feet apart according to variety's height, thinning to three plants per hill. Time succession sowings, two weeks apart.

Fast Growing Home Garden Melons

IN NO other crop does quality respond more quickly to careful breeding. Our special strains are selected for size, color, flavor and thick flesh.

Since even light frosts kill melon plants, and seeds do not germinate well until the ground is warm, only early varieties succeed in the northern states. Seeds may be sown in pieces of turf, or in pots, and started in a hot-bed or cold frame to get earlier fruits, but must be transplanted to the garden without disturbing their roots.

Remember, muskmelons must ripen on the vine. Except the Honey Dew, they do not improve after picking.

Quantity needed for 20 hills, 1 pkt.; 100 hills, 1 oz.

Grow in light soil, in full sun, where plants can be watered. Sow in hills, five or six feet apart each way, six seeds $1\frac{1}{2}$ inches deep to a hill, thinning out to 3 plants.

Onion Sets Grow Quickly

WHITE

RED
VAUGHAN'S BOTTOM ONION SETS

YELLOW

BECAUSE of the long growing season required by all onions grown from seed, most amateur gardeners use onion sets for producing both green onions, and mature bulbs. "Bottom sets," so-called to distinguish them from top sets, produced by some varieties of onions instead of seed, are onion bulbs artificially dwarfed by being sown thickly in rows, and stored over winter to be planted the next spring for a speedier harvest than seed would produce. Succession plantings can be made as long as the sets remain in good condition. For growing mature onions in home gardens we recommend Golden Globe sets.

Use large sets planted 2 in. deep for green onions, smaller 1 in. deep for mature onions; space the first one inch apart, the second 3 to 4 inches. Plant with the earliest crops.

Green onions will be ready in three weeks, mature onions in three months from the planting date. The use of sets thus shortens by many weeks the time it would take to grow either green or mature onions from seed.

EGYPTIAN PERENNIAL SETS (Top Sets)

FOR FALL PLANTING

P-30 PARSLEY, Champion Moss Curled. Pkt., 15c

Parsley

PARSLEY should be sown early because it is very slow to germinate; and it is best to use radish seed mixed with the parsley seed to mark the rows. Parsley is one of the richest of green vegetables in vitamin A, and iron.

The rooted parsley provides excellent flavoring for soups and stews. Quantity needed to sow 50 ft., 1 pkt., 200 ft., 1 oz.

P-30 CHAMPION MOSS CURLED. In about 70 Days. Robust, compact plants; the leaves are so crumpled and curled as to have the appearance of curled moss, with rich, green color. It is quite hardy.

Pkt., 15c; oz., 35c; 1/4 lb., 75c

Parsnips

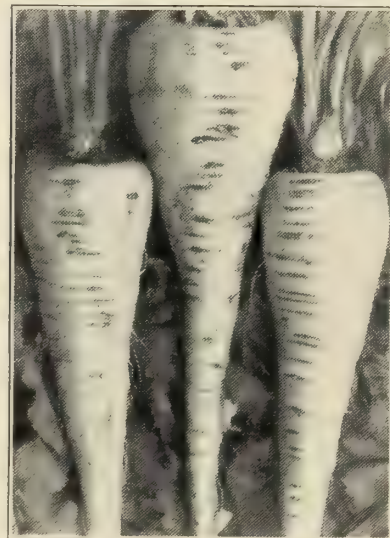

PARSNIPS may be harvested at times when the ground has little else to offer. Let them remain in the ground over winter, and dig them during a thaw or when the spring thaw comes—they will be as sweet and tender as ever. A freeze is required to sweeten them. Quantity needed to sow 25 ft., 1 pkt., 150 ft., 1 oz.

P-40 PARSNIP, HOLLOW CROWN. Pkt., 15c

P-11 LITTLE MARVEL PEA. Pkt., 15c

Sow Early for Success With Peas

PEAS are rich in sugar, which begins to turn to starch when they are picked; thus home gardeners alone can enjoy this crop at its best.

Where hot dry summer weather cuts short the crop, the problem is to get the heavy yield, large size and sugar content of the late sorts into early yielding varieties which will bear a crop before the summer's drought arrives. Our strains are selected for these qualities. Quantity needed for 100 ft., 1 lb.

Sow smooth seeded with earliest crops, wrinkled peas two weeks before frost proof date. Sow 2 inches deep, two inches apart in row, or in twin rows, 6 inches apart, with support between. Crop must mature before hot weather.

Very productive, hardy, luscious and sugary. Vine 18 inches, pod dark green, well filled. Pkt., 15c; ½ lb., 40c; 1 lb., 65c; 2 lbs., \$1.20; 5 lbs., \$3.00.

P-10 LAXTON'S PROGRESS. 62 Days. The earliest and by far the best of the large-podded, large fruited wrinkled peas. Of all the varieties producing peas of equal quality, this is the heaviest yielding. It bears long pods, averaging one more pea to the pod than Hundredfold. Pkt., 15c; ½ lb., 40c; 1 lb., 65c; 2 lbs., \$1.20; 5 lbs., \$3.00.

P-14 THOMAS LAXTON. Pkt., 15c.

S-437 NITRAGIN

Inoculate Your Beans and Peas

The roots of legumes, which include peas and beans, are the hosts of bacteria which secrete nitrogen from the air. The nitrogen stimulates the growth of the plant. This process is speeded up by applying a bacterial culture to the seed before planting. Nitragin is the original legume inoculation culture. S-437 Garden Size for beans, peas, sweet peas, lima beans and lupines. Pkt. 15c, 3 for 40c. Each packet treats 6 lbs. of seed.

Eat Your Own Peas Six Weeks for 40c

LITTLE MARVEL—Dwarf

THOMAS Laxton—Medium, Main Crop

Tall Peas

THE gardener who takes pride in his peas and whose space is unlimited will find the tall-growing sorts unequalled for length of season, heavy yielding and high quality. Support should be given and they should be planted with plenty of room. Liberal fertilizing will be well repaid.

P-9 IMPROVED TELEPHONE. 74 Days. Of the tall-growing varieties of late peas, "Vaughan's Improved Telephone" is regarded by experienced and successful growers as the best sort for general purposes. Uniformly large pods, 5 inches or more long, filled with 8 to 9 delicious peas. Grows 4 feet high; is a main crop variety, and a heavy yielder. Pkt., 15c; ½ lb., 40c; 1 lb., 65c; 2 lbs., \$1.20; 5 lbs., \$3.00.

MEDIUM HEIGHT

A HEAVIER yield without sacrificing quality is obtained from the varieties of peas which require some support. The varieties listed below grow to three feet high and should be given support of chicken wire or brush between companion rows. The smooth podded sorts may be sown first, and if not allowed to mature too much, will be found to be of good table quality.

Radishes for All Season

RADISHES from April to December are possible for the home gardener who sows early, midseason, summer and winter types. Radishes supply, in a 2 oz. portion, 6IU of Vitamin B-1; 11 milligrams of Vitamin C, 0.01 milligram of Vitamin B2.

Our strains are grown with the greatest care, which involves considerably increased cost, but the additional cost is small compared with the great difference in your crop.

Quick growth is the secret of success. A rich, light soil is required. The globe and olive varieties grow faster than the long type, and turn pithy sooner. The long types grow more slowly and are slower to turn pithy, so they endure heat better. Winter radishes should be sown in June or later and allowed to develop in the cool moist fall weather. Quantity needed for 15 to 20 ft., 1 pkt.; 75 ft., 1 oz.

Sow with earliest crops, ½ inch drill, 5 seeds to the inch. Sow early types one week's supply at a time, at weekly intervals. Mix with parsnips, parsley and carrots, to make the row. Harvest when large enough to eat. Summer and winter types have longer harvest.

SPINACH—KING

Pkt., 15c

Spinach

SPINACH demands cool, moist weather. Seed should be sown at the earliest possible moment in spring in rows one foot apart and thinned to six inches in the row. It matures in 45 to 50 days and quickly runs to seed in warm weather. The Antvorskov variety listed below, is most free from this tendency.

Home gardeners have generally adopted Swiss Chard and New Zealand Spinach as a greens crop, as both may be cut many times and will produce a continuous crop all summer and until freezing weather in the fall. A fall crop of spinach may be sown in late July or August and will find the cool, moist autumn weather favorable for growth. New Zealand Spinach, however, is better sown in early spring as soon as the ground may be worked. The value of spinach in the diet has been scientifically established by the vitamin investigation.

Tomato is No. 1 Home Garden Crop

NO HOME garden should be without this crop, which excels in nutritive value, heavy yield for space occupied, and the many ways in which it can be served. Whether the big ones or the commercial type are preferred for a main crop, an early variety should always be grown to start the harvest.

Plants started six to eight weeks before are set out two weeks after frostproof date when all danger of chill is over. Pruned plants can be grown to stakes or fence 18 inches apart; space unpruned 2 to 4 feet apart. Plants for late varieties can be grown from seed in open, preferably not transplanted.

Summer Flowering Bulbs

ACHIMENES

This is closely related to the gloxinia. Plant 6 to 7 bulbs in a 5-inch pot, or 9 to 10 in a 6-inch pot. The soil used for potting should be rich in humus and of an open, porous nature, allowing perfect drainage. A good mixture to use is equal parts of loam, leaf mold and sand. About one-third of the depth of the pots or pans should be occupied with drainage. After the young growth appears, great care should be taken to keep the soil moist, for a single severe drying will ruin the plant. Blooming time 8 to 10 weeks after planting. Mixed colors 3 for 60c; doz., \$2.00; 100, \$15.00.

RESURRECTION LILY

Shipped in July

(Lycoris Squamigera) For Outdoor Planting

Amaryllis Hallii. Produces in early spring attractive green foliage which grows until May, when it ripens off and disappears, and one not familiar with its habits would think the bulb had died, but about a month later, as if by magic, the flower stalks spring from the ground to a height of two or three feet, developing an umbel of large and beautiful lily-shaped flowers three to four inches across and from eight to twelve in number, of a delicate lilac-pink shaded with clear blue.

Culture—The bulb is perfectly hardy without any protection. The proper time to plant is in the summer when the bulb is dormant. Cover the crown about four inches. Each, 90c; doz., \$9.00.

Imported Super-Giant Amaryllis

Famous Holland Strain

Largest of flowers which can be grown indoors, and among the largest that grow in gardens, these Amaryllis can be flowered indoors in pots, or set out in the garden after danger of frost is over.

They are giants of their race, and since they are not grown from seed but from bulbets, their color is known in advance. They exactly reproduce their parent bulbs, which are grown in greenhouses in Holland and are carefully selected for vigor and beauty.

This exclusive strain is famous for outstanding beauty, clear coloring, size of flowers, and their form and texture. The initial cost is higher than for seed-grown bulbs, but they may be kept for years, and will produce their beautiful flowers annually. They make fine gifts, for which the donor will be remembered many years.

Flowers are borne in clusters of three, which open in succession. Sometimes three clusters are matured.

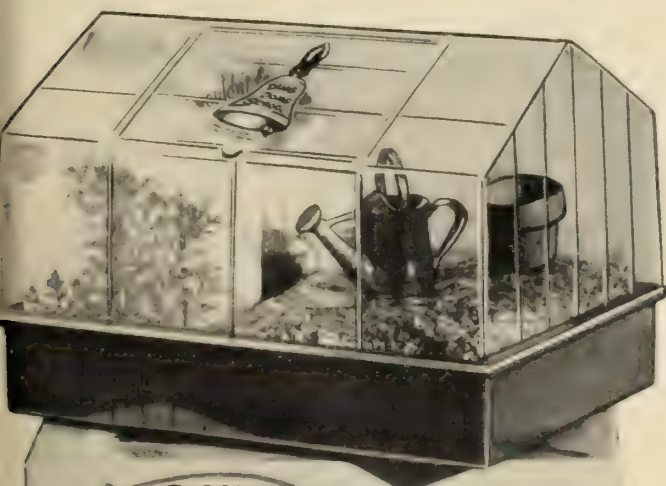

Bulbs 4 inches in diameter, your choice of white, orange, red, scarlet, dark red, or salmon striped, Each \$3.00; dozen, \$35.00 prepaid.

IMPORTED HOLLAND AMARYLLIS

American Grown Mixed Bulbs

These bulbs are grown from seed, and produce flowers having a wide range of colors, including red, pink and white in attractive stripes and patterns. The flowers may exceed 6-inches in diameter, and are borne in clusters, often two or three clusters in succession. The bulbs can be saved and flowered each year. 2 1/4-2 1/2 in. dia., each 40c; doz., \$4.00; 100, \$27.00; 2 1/2-2 3/4 inch dia., each, 50c; doz., \$5.00; 100, \$35.00; 2 3/4-3 inch dia., each 75c; doz., \$7.50; 100, \$55.00.

LONG-LASTING PLANT FOOD RICH IN ORGANICS

F-2014 GROGANIC. Research has proved that plants respond to food elements which are found in both mineral and organic forms. Those derived from minerals are effective quickly, and in soil temperatures too low for bacterial activity. Organics become available to plants more slowly, and require warm soil and bacteria to release their food content completely.

By combining mineral and organic elements, long-lasting nutrient can be provided. Groganic contains no filler whatever. Bulk is provided by dried blood, fish scrap, castor pomace and vegetable meal, all relatively expensive, which break down slowly. Boron is added to correct acidity and manganese sulphate to prevent chlorosis (yellowing) in leaves. Chemical nitrogen, phosphorus and potash are added—all quick acting and stimulating growth in early spring.

The analysis of Groganic is 6-11-6, 6% nitrogen, 11% phosphorus, 6% potash. An application of 15 lbs. per 1,000 square feet will provide continuous feeding effective in 10 days and lasting 300 days. 5 lbs., 85c; postpaid, \$1.20; 10 lbs., \$1.35; postpaid, \$1.95; 25 lbs., \$3.25; 80 lbs., \$7.45.

The use of sphagnum moss to prevent damping off of seedlings, highly recommended by the U. S. D. A.

VAUGHAN'S SPECIAL PURPOSE MIXTURES

We recommend our lawn mixtures, composed of suitable varieties of grass seed, because results are more satisfactory from a correct combination of grasses than from a variety sown alone. Our grass seed division has long been known as an authority on growing fine turf, and for the guidance of our customers we send our booklet on lawn-making upon request and without charge. A copy of this booklet is enclosed in every carton and bag of Vaughan's lawn seed mixtures.

For Your Protection—Always remember that we neither buy nor sell seeds that are not tested in our own officially recognized laboratory for purity, germination, identity and freedom from weeds.

GLAMOROUS BEGONIAS

20 Imported Tubers \$2⁰⁰
4 each of 5 Colors PRE-PAID

THESE ARE THE COLORS:

Red, White, Pink, Orange, Yellow

All Tubers 1¼-1½ Inches in Diameter, Each Color Separately Bagged and Labeled

What other plant can you grow which will bear flowers like the illustration, not once, but all summer long? Add to that, they demand light shade, of which we all have plenty and which few other flowers even tolerate. Enthusiastic letters from customers tell of their delight, such as this one Aug. 24, 1953 from C.G.M., Aurora, Ill., who says: "The Glamorous Begonias I ordered in March were prettier than your picture. Beautiful clusters, the dark red was a dream, in fact all colors, white, red, pink, orange and yellow."

They are not difficult to grow when given their simple requirements as to soil, light, temperature and water. On the contrary, they are among the easiest of all flowers for the amateur to start under protection and move outdoors to a selected place prepared for them.

They will thrive in a shady place, where you have difficulty growing other flowers. They not only beautify the garden, but their cut blooms are long-lasting and spectacular in bowl arrangements. Begonia corsages have begun to rival orchids in popularity. National magazines have published color pictures of their gorgeous blooms.

If the simple formula of their culture which we supply is followed, they will reward you more bountifully than any other flower you can grow, bearing throughout the summer flowers which increase in size and beauty, until frosts kill the plants in the fall. The tubers can then be lifted and kept over winter, as easy as gladiolus bulbs.

SPECIAL OFFER 8 Mixed for \$1.00.

It is a collection of 7 of the most beautiful gladioli, so far excelling ordinary varieties there is no comparison. Bulbs of each variety come separately bagged and labeled by name. You receive 7 bags of bulbs, can plant them in a studied arrangement, tell your admiring friends their correct names, and exhibit them by name in your local flower show. All bulbs are of flowering size, young and vigorous, the kind we use to grow exhibition flowers. Every bulb will flower if planted according to directions. They will also multiply and produce a crop of new bulbs for planting next year. Your purchase will be a long-term investment in gladiolus beauty.

We take pride in making our Rainbow Garden of gladioli the greatest value available to home gardeners.

WHAT OUR CUSTOMERS SAY ABOUT RAINBOW GLADIOLI

Kenosha, Wis., Oct. 5
This spring I bought your Rainbow Collection of Gladioli. I dug a trench 8 inches deep, 6 inches wide and placed in the bottom a mixture of compost, peat moss and 0-20-20 fertilizer. After 3 days I planted the bulbs in the soil removed from the trench, and as they grew fed them with soluble plant food, and watered heavily. When they bloomed I had magnificence in my garden. Some of the stems grew 6 feet tall loaded with flowers, some 5 inches across. Several had 24 florets. C.F.H.

Fond du Lac, Wis. April 13
I have always had good luck with your bulbs and seeds, having had Glads 4½ feet in height and up to 7 inches across for the blossoms. R.E.G.

Malvern Ark., Jan. 13
Your Gladioli were wonderful. We had the Rainbow Collection, the neighbors said they had never seen so many lovely colors. Mrs. F.P.

Beautiful Gloxinias

TYPICAL GLOXINIA FLOWERS

Imported Tubers, 1½ to 2 inches in diameter, Each 40c; 3 for \$1.10; doz., \$4.00 prepaid.

Modern gloxinias are surpassed in beauty by few flowers. Their large bell-shaped blossoms are beautifully colored, in red, pink and blue tones, sometimes edged with white. The colors have exceptional depth and richness. Gloxinias can be grown from tubers which resemble those of Tuberous Rooted Begonias and require similar culture outdoors. They can be flowered in pots in the house, or started indoors and moved to the garden when danger of frost is over. They like a porous soil, well drained, in light shade outdoors, but full winter sun indoors. You may select from the following color groups:

Red
Blue
Pink

Red and White
Blue and White
Pure White

Your order must be received so that shipment can be made before March 15, 1954.

White Pigeon, Mich. Jan. 28
I bought Gladiolus bulbs of you two seasons and I have never seen such large, beautiful flowers. The stalks were nearly 5 feet in height, of which over half was the flower spike. Everyone who saw the flowers said they were unusually large. Mrs. G.R.

Clifton Springs, N.Y. April 17
The 1952 Glad collection was wonderful beyond comparison. All our available space now filled, don't know where we can put the 1953 collection but have got to have it or we may miss a new color. L.G.W.

Streator, Ill., May 14
I want to enter your Gladioli in the Garden Club show. I have had many Glads from your store and have had wonderful blooms from them. I thought some new bulbs might win me a prize. Mrs. L.S.
